TEK013154 (Oracle - 10 + Year)

Highlights

- Having Good experience in ORACLE DBA and worked in Banking, Retail, Manufacture and Telecomm domains in various companies.
- Worked extensively in RDBMS like Oracle Exadata, ORACLE 9i/10g/11g/12c/18c/19c and Database Administration. Oracle L2 & L3 support.
- I have worked in Linux, Windows NT, 2000, XP and Vista platforms and have knowledge in Postgress, Golden Gate, AWS and MS SQL server.
- Also Having Experience in Software Testing.

Skills

Other Skills

- **Software :** Oracle – Exadata , Oracle 19c ,18c ,12c ,11g ,10g & 9i and Linux , Windows Vista / XP / 2000 / NT / 98 / 95
- **Tools :** Foglight 5.5.8 , TOAD 9.5 & QC 9.2 , Oracle OEM. SQL Developer

Projects

Project - 1

Role : Data Base Administrator

Responsibilities :

- Handled all kind of refresh (data/table/schema/database) based on user request.
- Monitoring the space management in the table spaces which is crossing below threshold values.
- Handling user request via Service now for different issues in databases such as transaction hang, connectivity, performance problem etc
- Controlling the user's operations by limiting the memory spaces and grant the necessary roles , privileges and profiles to the users.
- Creation of Table spaces, data files, users etc., for the project requirement.
- OEM monitoring for prod databases

Project - 2

Role : Data Base Administrator

Responsibilities :

- Handled all kind of refresh (data/table/schema/database) based on user request..
- Monitoring the space management in the table spaces which is crossing below threshold values.
- Servicing user request via Service now for different issues in databases such as transaction hang,

connectivity, performance problem etc
- On Call Supporting.
- Controlling the users operations by limiting the memory spaces and grant the necessary roles, privileges and profiles to the users.
- Creation of Table spaces, data files, users etc., for the project requirement.
- OEM monitoring for prod databases.
- Oracle database server Patching activity.
- Rman – handle backup space issue in Oracle database.

Project - 3

Role : Data Base Administrator

Responsibilities :

- Database creation and installation of 12c databases.
- CDB and PDB creation of 12c database through DBCA and Manual method.
- Database upgrade from 11.2.0.3 to 11.2.0.4 completed more than 50 databases.
- Dataguard configuration for physical standby method.
- Handled all kind of refresh (data/table/schema/database) based on user request.
- Monitoring the space management in the tablespaces which is crossing below threshold values.
- Servicing user request via Remedy ticket system and Service now for different issues in databases such as transaction hang, connectivity, performance problem etc
- Involved in Business continuity plan (BCP) activities which involves failover to the standby db for unplanned outage and switchover & switchback for planned outage
- On Call Supporting.
- Controlling the users operations by limiting the memory spaces and grant the necessary roles, privileges and profiles to the users..
- Creation of Tablespaces, data files, users etc., for the project requirement.
- OEM monitoring for prod databases.
- User Management process – Drop and in-active.
- Exadata Patching activity.
- Rman – handle backup space issue in Oracle Exadata.
