

**TEK09832 (Appian - 2 + Year)** Bachelor of Engineering

Highlights

- Meticulous and dedicated approach toward new learning.
- Efficient intermediate level programmer with skills in SAIL, Appian, and Java along with exceptional verbal skill.
- Responsible for analysis, design, development, implementations, enhancements, optimization, and testing of applications in low-code tools like Appian BPM & Service Now.
- Involved in developing components and artifacts in the areas of Appian Solution design. Involved in recruitment activities, leveraging my expertise to identify top talent for the team.
- Seeking to deliver excellence for growth along with the organization's goal and objectives

Skills

Primary Skills

- Appian Low-Code Platform
- Customization & Configuration

Secondary Skills

- Process Analysis

Other Skills

- Appian Business Process Management
- Appian Development
- SAIL
- Service Now
- MySQL
- Java
- System Integrations
- Requirement Analysis
- Solution Design Documents
- Deployment
- Optimization

Projects

Project - 1

Responsibilities:

- Implemented end-to-end case management system for healthcare clients with Web API integration.
- Involved in process automation, including story grooming, requirements analysis, and solution design to meet client needs.
- Conducted process automation, solution design, and deployment to meet client needs.
- Configured interfaces, expression rules, and CDTs for enhanced functionality.
- Developed record types with related actions for efficient data management.
- Integrated Process Models, Web APIs, and Data Stores for cloud-based data handling.

- Participated in the development and testing of the API body with Postman.
- Customized Related Actions and Email Notifications for streamlined workflows.
- Creation of Solution design documents and PDD's.

Project - 2

Responsibilities:

- Implemented Queries and expression rules to extract and populate data from multiple tables.
- Enabled buyer validation and contract workspace creation in Ariba through related actions.
- Designed Interfaces for user-friendly editing and summary views of the application form.
- Created record types with summary views and related actions for efficient data management.
- Implemented Process Models, Expression Rules, Constants, Interfaces, Record Types, Custom Data Types (CDTs), and Data Store for secure cloud-based data verification and storage.
- Customized Related Actions, Activity History, and Email Notifications for streamlined workflows.
- Ensured seamless end-to-end process automation for Electronic Procurement records.

Project - 3

Responsibilities:

- Configured and set up MID servers for discovery, customizing parameters to match specific environment needs.
- Established and managed Discovery schedules for both on-premises and cloud resources, effectively populating the CMDB with accurate data.
- Monitored critical classes within the CMDB, ensuring accurate and up-to-date information.
- Managed the Identification and Reconciliation engine, addressing duplicate, orphan, and stale CI's.
- Conducted manual troubleshooting and resolution of various discovery errors, maintaining a healthy and clean CMDB.
- Performed comprehensive manual testing for workflows, forms, email notifications, and service catalog, ensuring seamless functionality.

Awards

- Received Q2 – Employee Appreciation 2023
- Received Q3 – Employee Appreciation 2022
- Associate Appian Developer Appian [ACD100 (L1) certified]
- ServiceNow System Administration Certification [CSA]
