TEK09957 (Software Development - 5 + Year)
📘 Bachelor of Engineering

Highlights

- "Experienced professional with over 5 years in asp.net ,.net framework ,C#,SQL development.
- Skilled in development and database design, query optimization, and stored procedure development.
- Proven ability to deliver high-quality solutions to meet business needs".

Skills

Primary Skills

- HTML/CSS
- SQL

Secondary Skills

- Git / GitHub

Other Skills

- Programming Languages: ASP.net 4.5+,C#, MVC,.net framework
- Web Technologies: HTML,CSS, JavaScript
- Databases: SQL Server, Oracle
- Excellent teamwork and collaboration abilities
- Effective verbal and written communication
- Attention to detail and commitment to delivering quality work
- Ability to handle multiple tasks and meet deadlines

Projects

Project - 1 - Software Industry (60 months)

Roles and Responsibilities:

- Utilized expertise in MS SQL Server 2017, Oracle 12c, and PL/SQL to design, develop, and optimize database solutions tailored to business requirements. Implemented advanced query optimization techniques to enhance database performance, ensuring efficient data retrieval and processing.
- Designed and implemented complex stored procedures, functions, and triggers in MS SQL Server and Oracle databases to automate business processes and improve data integrity.
- Played a key role in database design and modeling activities using Visual Studio 2012 and Oracle SQL Developer, ensuring scalability, performance, and maintainability of database systems.
- Conducted performance tuning and troubleshooting activities to identify and resolve bottlenecks, improving overall system performance and responsiveness.
- Assisted in database administration tasks, including backup and recovery, security management, and database monitoring using tools such as Toad 10.1 and SQL Server Management Studio.
- Collaborated with cross-functional teams to gather requirements, provide technical guidance, and deliver

database solutions.

- Documented database designs, processes, and best practices for knowledge sharing and future reference. Worked on ASP.net and C#
