

**TEK07300 (SAP - 12 yrs)**

■ Bachelor of Engineering

## Highlights

---

- 12 years of experience in SAP with 4 years of experience as SAP IBP Consultant.
- Worked on implementation, roll out and support project in SAP S/4 HANA IBP.
- Worked on implementation for SAP IBP S&OP (Demand and Supply Planning).
- Extensively worked on areas of IBP Demand Planning, Supply Planning.
- Have knowledge of CI-DS, SAP Ariba SCC and SAP PP modules.

## Skills

---

### Primary Skills

- IBP

### Secondary Skills

- S4 HANA

### Other Skills

Operating System: Windows

Environment: SAP IBP S4 HANA, CI-DS

Database: HANA/Oracle

Internet Tools: Citrix, HPQC, Service now, Remedy

Management and Leadership Skills

Leading the team, managing multi-Vendor Projects, and Driving the customer status calls.

## Projects

---

### Project 1: Voestalpine - IT Industry (20 months)

- Supporting for levels L1, L2, L3 and L4 incidents on time without missing SLA's.
- Analyzing the errors, searching for causes of errors, provide corrective solutions, and suggest preventive actions to avoid recurrence. Such as Key figure values not tallying in reports, heuristics not working for certain location product combination, data publish to S4 HANA not working as expected.
- Handling change requests such as Adding new attributes in master data type, building product substitution functionality etc.
- Monitoring of Jobs and creating new jobs. Improved performance of few jobs by modifying the logic of data extraction in S4 Hana.

## **Project 2: CALERES - IT Industry (18 months)**

- Analyzed S&OP operator profiles for Time series-based Supply Heuristics, Optimizer, and Forecast Consumption.
- Configuration of SAP IBP including Master Data, Planning Area, Key Figure, Key Figure Calculation
- Enhancements through web services to enable views for S/4 Outbound with control tables for relevant data to flow inbound into IBP and customized programs to read S/4 Inbound staging tables and create STRs, PRs, and Planned orders for CPI-DS tasks.
- Worked on Sales history data cleansing, Product segmentation.
- Created new key figures which were required to calculate final consensus demand.
- Worked on data integration between SAP S4 Hana and IBP systems vis CPIDS.

## **Project 3: Cargill, Incorporated - IT Industry (32 months)**

- Worked on pricing extensively including CPE (commodity pricing engine) pricing conditions which are specific to Agri industry.
- Contract management, quantity contracts, price contracts, GTM contracts (Third party, intercompany, intra company scenarios), master contracts.
- Build new complex programs to handle quantity adjustments (roll forward, pull back) in the contracts retroactively.
- Worked on sales order call off enhancements, form changes, infostructure changes, correction documents etc.
- Worked on EDI interfaces of orders, order response, invoice.
- We followed Agile methodology. Completed all sprints, system integration testing, technical cutover, data loads, business go live, PGLS activities.

## **Project 4: Procter & Gamble Company (P&G) - IT Industry (40 months)**

- Implemented Orders order response, invoice EDI interfaces for few Big customers of J&J.
- Gather requirements and prepare mapping specs accordingly.
- Collaborate with ABAP team for any developments.
- Need to handle testing and go live activities.
- Maintain good relations and proper communication with end users.
- Worked on Pricing, Stock transfers, Third party orders and other standard SD functionalities.
- I was part of a project called VAN (value added network), which was aimed at reducing the tax by routing the goods via Singapore.

## **Project 5: Mondelez International - IT Industry (34 months)**

- Supporting for levels L1, L2, L3 and L4 incidents on time without missing SLA's.
- Analyzing the errors, searching for causes of errors, provide corrective solutions and suggest preventive actions to avoid recurrence.
- Handling change requests.
- Implemented Vietnam SAP roll out project.
- We had to understand AS-IS and propose TO-BE model.
- Perform required configurations, create new programs, set-up batch jobs, migrate master data from legacy system.
- Manage go-live and hyper care activities.
